## **Our Observation - POOR INTEGRATION LEAD TO "SILORIZATION"**

# MANY HAVE INVESTED IN ADVANCED SOLUTIONS TO IMPROVE OPERATIONAL EFFICIENCY, BUT POOR INTEGRATION LEAD TO "SILORIZATION"

- Planning and Scheduling;
- Operational Management;
- Asset Management, Vibration Monitoring, AMADAS, etc.;
- Alarm Management, Operator Training Simulator

#### MANAGEMENT CONCERNS AND CONTINUOUS IMPROVEMENT

## **Different worlds**

| V2016 | April 2016 | © Yokogawa Electric Corporation

## The different domains

Level 4	Enterprise Resource Planning system (Office domain)		
	evel 3.5	Demilitarized Zone (DMZ)	
Level 3	Systems to integrate level 2 and 4 (MES)		
Level 2		upervisory, control and safety systems (PCD)	ОТ
Level 1		Sensing and manipulating equipment (e.g. instrumentation and valves)	

PCD = Process Control Domain MES = Manufacturing Execution System

## So many stakeholders

## **Change management**

## **Prerequisites for Change**

## **IT/OT Integration**

## **Business Excellence**

## **Key Pillars for Operational & Business Performance**

#### **Business Performance**

#### Supply Chain Management

Minimize disruption to supply chain and ensure committed delivery.

#### Operations Management

Ensure safe operation and regulatory compliance - License to operate.

#### Asset Management

Maximize asset deployment and avoid unplanned downtime by ensuring equipment is healthy and operating in the optimum mode.

#### Production Management

Clear alignment of business and production objectives. Minimize operating cost and improve yield.

#### **Operational Performance**

Co-innovating tomorrow™

## **Pain and Owners**

#### Level 3: Vision of a Solution

Level 2: Admitted Pain Companies willing to discuss problems, difficulties, or dissatisfaction with the existing situation. Business owner: Often the person at the end of the pain chain and has direct influence on the process.

Budget owner: The person who is able to make budget available for the investment

#### Level 1: Latent Pain

Companies who are not looking and not actively trying to solve a problem are in latent pain.

YOKOGAW

Co-innovating tomorrow™

## **Chaos versus managed**

- Many boxes many brands
- Multiple policies for infrastructure and security
- Many point to point interfaces
- Excel is our best friend
- Significant human intervention
- No single truth

- Brands and boxes managed
- One policy for infrastructure and security
- Few interfaces preferable via middleware
- Excel is not an solution
- Almost no human intervention
- One single truth

#### Co-innovating tomorrow™

## **Cyber Security**

| V2016 | April 2016 | © Yokogawa Electric Corporation

## **Causes of intrusions**

- No proper procedure in place for Cyber security in the Operational Technology (OT) Domain.
- No ownership for Cyber security in the OT Domain.
- Company information not well protected.
- User profiles not well defined.
- Hardware not proper hardened (e.g. switch of USB ports)
- Computers and servers don't have to latest patches.
- No updated anti virus software.
- No proper monitoring of hardware, software and applications.

## **User and Information streams**

The way information is exchanged between the different layers significantly determines the Cyber Security Infrastructure

#### ARC Forum (9<sup>th</sup> – 12<sup>th</sup> Feb. 2015 in Orlando)

#### Press Release (Japanese/English)

Tokyo, Japan - February 10, 2015

Yokogawa and Cisco Deliver Cybersecurity Solutions for Shell

Yokogawa Electric Corporation announces a collaboration with Cisco Systems, Inc. to deliver Shell's SecurePlant initiative at Shell. SecurePlant is a comprehensive security management solution for plant control systems that was jointly developed as an initiative between Cisco, a leader in the IT industry, Yokogawa, a leader in mission-critical plant automation systems, and Shell. The three companies have agreed to proceed over the next three years with the implementation of SecurePlant at around fifty Shell plants globally.

Industrial producers around the world face a wide range of operational challenges in areas such as cybersecurity that pose a pervasive threat to safety and availability. Most companies with global operations, however, still take a relatively simplistic plant-by-plant approach, such as implementing operating system security patches and anti-virus pattern file updates. As a result, security levels tend to vary at each plant.

In the general practice of control system security management, individual control system vendors extensively validate security patches and anti-virus pattern files to confirm that they do not interfere with system operation, and then report the results to their customers for implementation. Since plants tend to use a variety of control systems and equipment from different vendors, occasionally with multi-generation platforms from a single vendor, this process is often complicated. For this reason, plants increasingly have the need for plant-wide integrated services that take a more holistic and efficient approach to the management of system security

With the aim of standardizing security practices at Shell plants around the world and minimizing control system vulnerability, Yokogawa and Cisco collaborated on the design of the SecurePlant service and will jointly provide deployment and operational services.

The SecurePlant solution is designed as a standard solution that consists of the delivery of OS patches and anti-virus pattern files for control systems and the provision of real time and proactive monitoring of solution delivery, as well as a help desk operation to manage this solution.

Supplier-certified Windows security patches and virus signature files are distributed from a SecureCenter to the SecureSite at each plant via Shell's existing global network. The real time and proactive monitoring capabilities enable the centralized management of plant security. A customer help desk operated jointly by Yokogawa and Cisco is available 24/7/365 to manage solution related incidents.

Moving forward, Yokogawa and Cisco will continue to offer comprehensive security solutions involving the deployment, operation, and monitoring of control system environments. These services are applicable to plants of all sizes in a wide variety of industries, including facilities spread out over a large geographic area. In addition, both companies will leverage their technologies and experience to develop deep industrial

## Managed Services delivered by Yokogawa

Requirement	Yokogawa Managed Service		
Asset Inventory	Automated asset discovery and asset inventory		
O.S. Security patching	Automated distribution of validated Microsoft updates		
Anti-Virus Management & Updates	Automated distribution of validated signature updates		
Remote Access	Unified secured remote access, with 2 factor authentication		
Log file collection	Automated log file collection to central log server		
Security majority reporting	Automated report of the status of the applied security measures		
Proactive system monitoring	CPU, Memory load, Disk usage, system and software failures		
24x7x365 supported	Helpdesk and managed services		
Incident response	Global security incident response team

## Infrastructure

## **Virtual Machines**

Virtualization is a proven software technology that is rapidly transforming the IT landscape and fundamentally changing the way that people compute, such as an operating system, a server, a storage device or network resources.

## **Middleware setup**

## Storage

Storage Area Network (SAN)
Block level data
Primary media: Optical fiber
Reliability
Performance
Access

# Network Area Storage (NAS) File level data Primary media: Ethernet Remote Access File Sharing Scalable

## Hyperconverged Systems

- Optimize performance and efficiency simplify deployment of servers, storage, and networking for business applications
- Centralized management of compute, storage and virtual machines
- 10GbE networking for application and storage performance
- High availability

## **Summary Integrated Production Management System**

- IPMS is critical for the operational and business performance of the plant
- Assign a business owner and budget owner for the IPMS
- Write a IPMS master plan at an early stage of the project
- IPMS budget is often forgotten with consequences
- Deployment of the IPMS afterwards happens rarely
- IPMS is the responsibility of the operator and not the EPC
- Delivery time IPMS is often under estimated (12 18 months)
- The IPMS provides the single truth which is a completive benefit
