Lock

"Extra
burdon/time"

Accuracy depends
on available time

No managment
over overview

Manual

Different between
automation
systems

After the facts

No bypass
information

Still a lot of
manual work

Takes a lot of time
and dedication

"Short" bypassen
are not covered

Manual analysis is
still required

Snapshot (=how
accurate?)

Continious manual
maintance &
configuration

No analysis

Snapshot (what is
on know)

No history or
logging

Uniformity
between
automation
systems

"Blocks" operator
("sdfg..." effect)

No managment or
control of bypasses

Value!? For the #company

Adding value

You can use your own procedures, templates and existing infrastructure and apply it on different automation systems

Company

What is my additional value and why does my company need this?

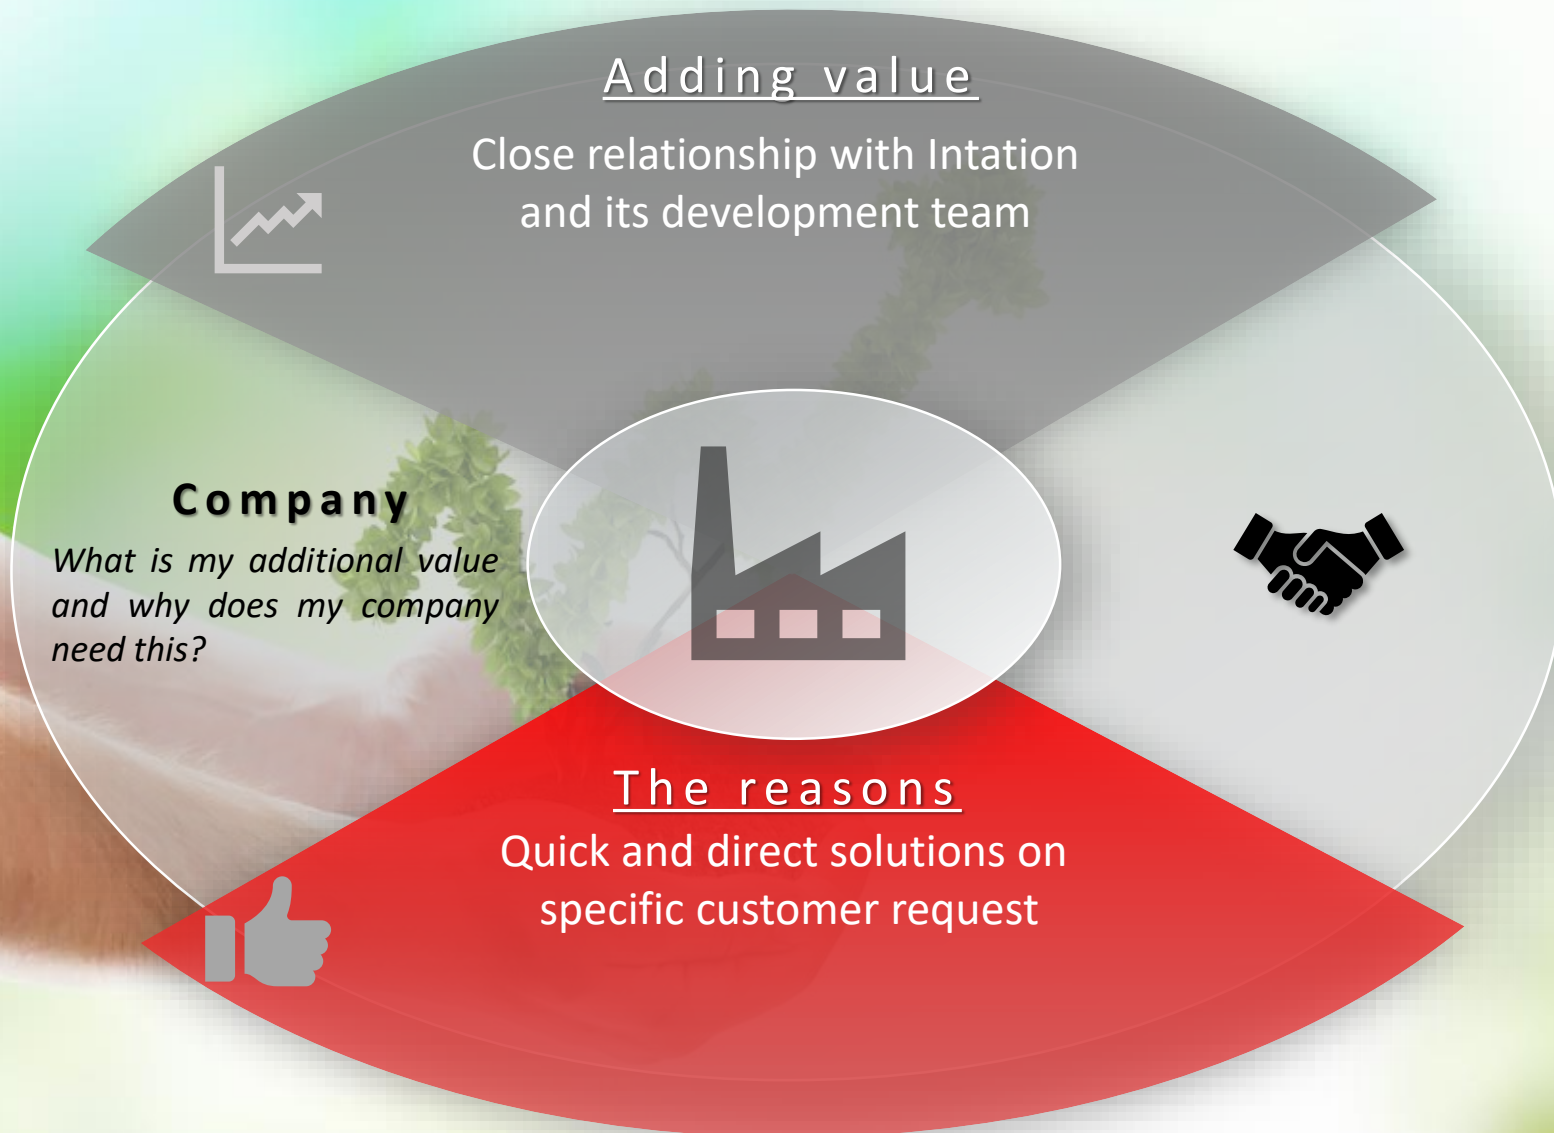

The reasons

Minimal impact on change management and easy integration with existing infrastructure all in one application conform international safety standard IEC 61511

Value!? For the #company

Value!? For the #management

Adding value

Detect every bypass and analyze all the required data through advanced analytics

Management

What is my additional value and why does my management need this?

The reasons

Detect improvements for your automation configuration, possible risks and make your process more lean and reliable

Value!? For the #management

Adding value

Transforming bypass procedures to a lean process. By default audit logs for external audits

Management

What is my additional value and why does my management need this?

The reasons

Create minimal overhead (waste), measure workflow performance, which results in more efficiency and focus on your personal and company goals.

Value!? For the #operators

Adding value

Follow and track the procedures independent from the process or activities and have a live confirmation and verification of your requested bypass

Operators

What is my additional value and why does my operators need this?

The reasons

Eliminating human errors, live information on one bypass dashboard and increasing reliability and safety in the field

Pricing!?! Keep it short & simple!

- Usually based on

- Quality
- Feature
- Users
- Tags
- Discover
- ...

- Keep it simple for everybody!
- Unlimited use of tags / users and application

One Year: €5300

Two Year: €5194

Three Year: €5090

YES YOU CAN

+ visualization= €1500

Conclusion... #Questions...?

Conform international safety standards. Important for insurances

Applicable on different types of systems

Making your procedures Industry 4.0

In depth insight in your bypass events and data

Flexible control of your approvals

Efficient and easy procedures (LEAN)

Less overhead and quick request (LEAN)

Operators are not blocked by procedures

Live overview of all bypasses and requests

SERVICES

Control the evolution of your plant by integrating the right technologies.

AUTOMATION
