Summary

TechnipFMC is a world leader in designing steam crackers, from concept stage through construction and commissioning for both grassroots plants (including mega-crackers) and plant expansions using its proprietary technologies. TechnipFMC provides a wide range of services to the ethylene industry.

TechnipFMC has innovated its cracking furnace design, in which the chemical cracking reactions take place. Some of these innovations that improve the cracking process like the three-lane radiant coil, Swirl Flow Tube (SFT®) and the Large Scale Vortex (LSV®) burner have been applied in both new furnaces and/or cracking furnace revamps.

Professional background of the speaker

Jelle-Gerard Wijnja is Technology Manager Ethylene Furnaces at Technip Benelux B.V. He received his master degree chemical engineering at the University of Groningen, the Netherlands, in 1996.

After graduation on the topic of flameless combustion he joined Technip as process engineer of the ethylene group in 1997. In the field of ethylene cracking furnaces Jelle-Gerard has participated in a large number of studies, proposals and projects.
